

EGC2 Week

European Parliament, Brussels, 6<sup>th</sup>-7<sup>th</sup> March 2013

## Radioastronomy: *a unique global ICT enabler*

*“shaping Green digital cities”*

# Radioastronomy: towards *Green ICT machines*

## Research Infrastructures

Thomas Parker (Nature, 2012): **Must act when facility is new**

They have the **Responsibility** to lead **Science & Social Development**  
Early Engagement of **Industry** for the benefit of **Science and Society**

Drive socio-economic development and competitiveness in Africa and Europe

# ICT: EU-AFR policy alignment – A digital Agenda FOR MUTUAL BENEFIT

Nov. Lisbon, 2013; EUAFR -ICT/P8  
(FCT hosts, Official announcement)

E-Infrastructures in Africa: e-science philosophy

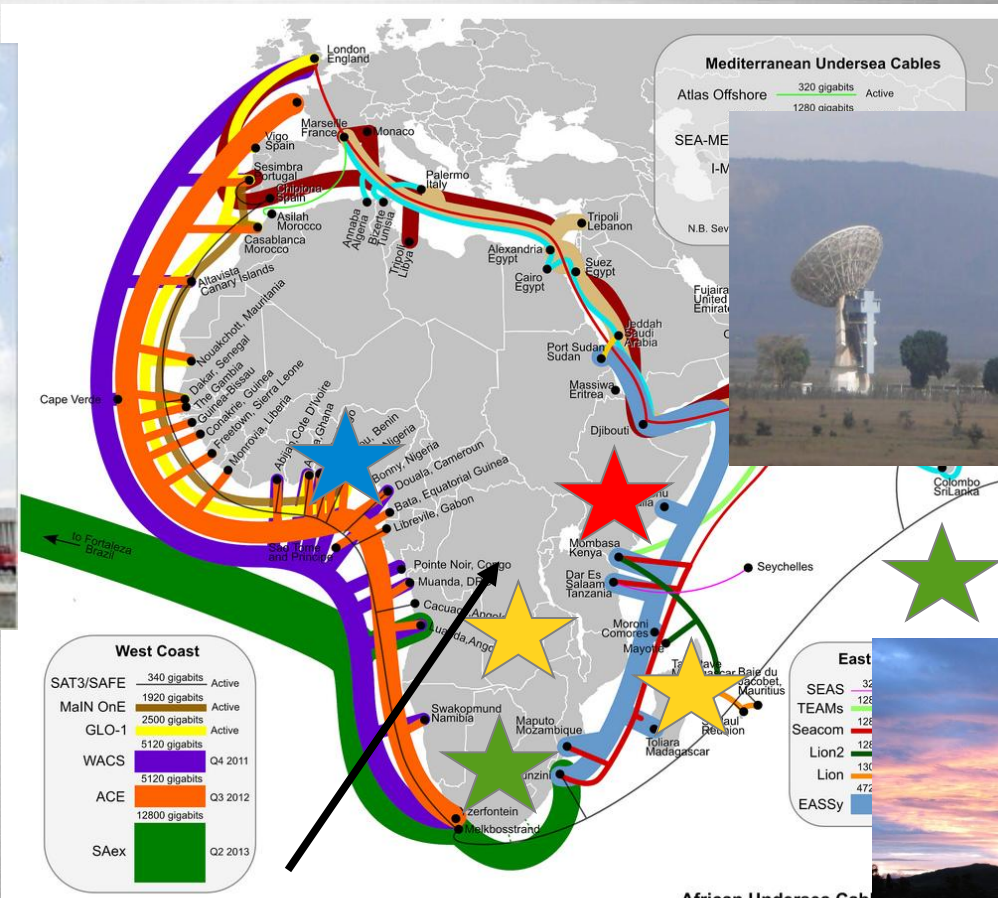

# An example: Africa VLBI Network - from technology to e-science infrastructure – ICT gateways !

## State of art nodes (cities) of a digital network

Ghana

Kenya

South Africa

African Undersea Cable  
<http://manypossibilities.net/african>  
 Version 30 - Aug 2011

# An example: Africa VLBI Network - from technology to e-science infrastructure – **Connectivity !!**

Press Release (April 2012) : New high-speed 15,000km international link seamlessly connects African radio astronomers to Europe through GÉANT and UbuntuNet (2Gps point to point)

 HartRAO

# Radioastronomy: a **UNIQUE** driver from the Terabit Era to the Exabit Era \*

## Impact :

- Large pipes (terabit optical fiber)
- Large processing power (HPC)
- Cloud Computing & Storage)
- Synergies: **Galileo**, **Copernicus**

## **Societal Impact:**

- E-health (maternal care)
- E-schooling/e-learning

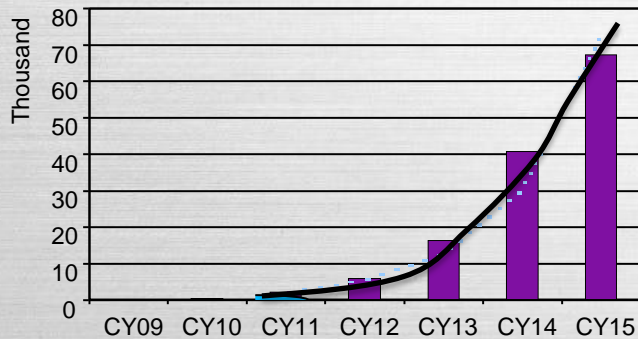

**\* LTE – 4G Convergence mobile/optical fibre networks..driving market !**

**Know-how transfer**

# An example: driving markets, shaping standards

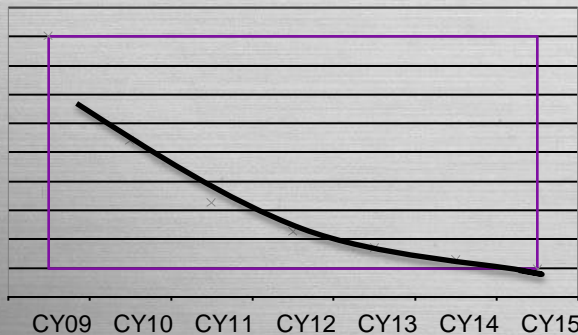

## From Coast to Coast – the path towards 100x IP 2012 !

100G WDM Optical Network Hardware Ports

Source:  
Infonetics  
2011,  
NSN 2012

Market price per 100G port

**Bandwidth assumption:**  
1 Tbps throughout  
Phase 1 and 2

**Bandwidth assumption:**  
41 Tbps in Phase 1  
61 Tbps in Phase 2

**360 (Phase 1) +  
640 (Phase 2)  
= 1 000  
x 100G needed**

**14 760(Phase 1) +  
46 240 (Phase 2)  
= 51 000  
x 100G needed**

**Energy Sustainable**

**See Lourdes Verdes-Montenegro talk**

# Radioastronomy: towards *Green ICT machines*

Leadership

- Precursor of the city of the Future :
- Power the Internet of the Future technologies
- **Impact on African Infrastructure**
- **Benefit remote communities**
- **Unique Training EU, AFR**

Astronomy and Industry: new market opportunities for both continents

# SKA, a Green ICT machine:

*It is not:*

*A house on top of a mountain  
with a machine inside*

*A tunnel ring under a valley*

*A Bio data center*

*It is:*

*Its core: a digital city!*

*Remote stations: spread digital  
villages*

*The Universe camera, after an  
Exabyte and an Exaflop*

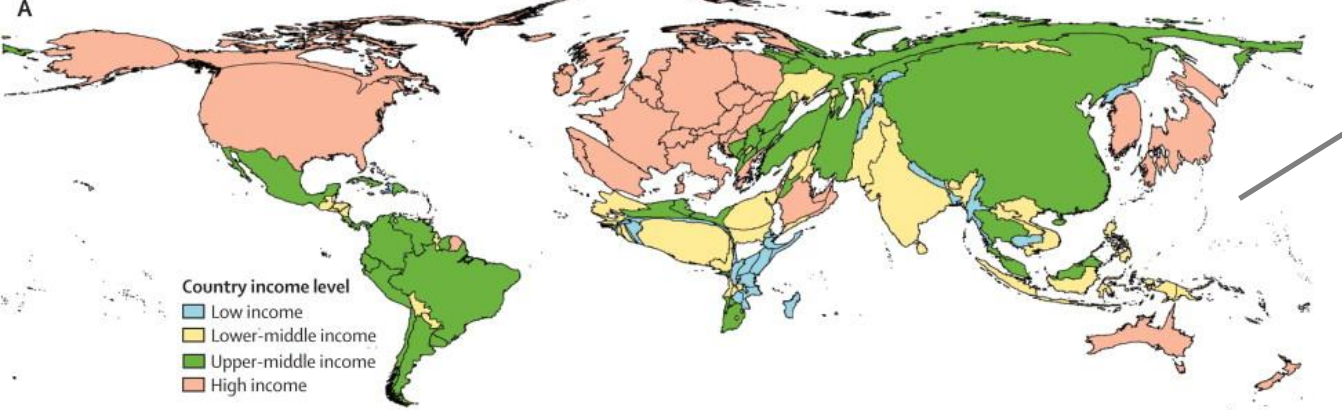

Astronomy - A bright future for educating young people

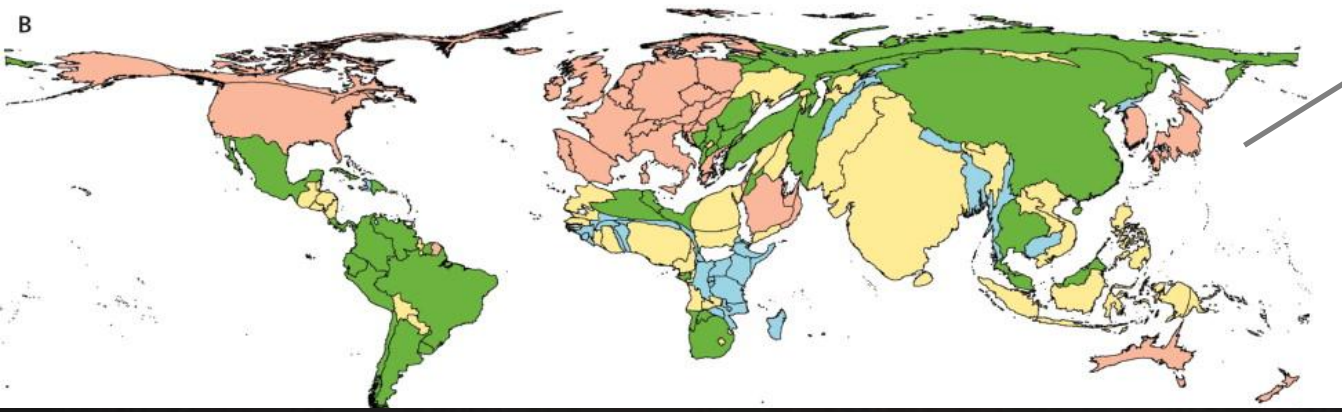

# Radioastronomy: fight the Digital Divide and ICT illiteracy

Internet Users

Mobile Phone Users

Drive socio-economic development and competitiveness in Africa and Europe

# Radioastronomy: towards *Green ICT machines*

*Let's make it together!*

**Leadership**

**driving innovation,  
societal benefits,  
market capitalization,  
fulfilling H2020**

Drive socio-economic development and competitiveness in Africa and Europe

# Radioastronomy: **AERAP** Key actions

- Couple Future Internet Applications
- Cloud based distributed processing and science access, including citizen science;
- **Promote hands-on activities/training projects**
- Promote European and African projects for extra ICT capability exploitation: e-Science, e-Learning, synergies with distributed remote sensing, remote medicine etc.

Drive socio-economic development and competitiveness in Africa and Europe
